

Dataset

For this project I will use the AI Worker Burnout & Attrition Risk Dataset from Kaggle. This dataset contains survey and workplace data from employees working in AI-related roles. The dataset includes approximately 1,500 records describing worker demographics, job characteristics, stress indicators, and AI usage levels. The goal of the dataset is to analyze workplace conditions that may contribute to burnout and employee attrition risk in AI-related jobs.

Project Objective

The objective of this project is to analyze factors that contribute to worker burnout and attrition risk in AI-related jobs. I will explore how variables such as work hours, stress level, job satisfaction, and AI tool usage relate to burnout and employee attrition.
